

# Pattern of invasion

## Pattern of invasion

The pattern of invasion refers to the shape of the advancing front or border of the tumour. Like tumour grade/differentiation, it is of important prognostic value. The UK Royal College of Pathologists recommends the grading of pattern of invasion into two broad categories: cohesive and non-cohesive.

The pattern of invasion refers to the shape of the advancing front or border of the tumour. Like tumour grade/differentiation, it is of important prognostic value.
